# How to read this report

**WHAT OROS IS**

Software that studies the US stock market every day, proposes a practice portfolio, and emails this report. It never trades and never touches real money. Everything here is simulated practice.

**MARKET REGIME (page 1)**

The overall health check. SPY is a fund that tracks the S&P 500, the 500 largest US companies - we use it as 'the market'. If SPY sits above its own 30-week average price and that average is rising, conditions are healthy (BULL). VIX is the market's fear gauge - it measures how much turbulence investors expect. When fear spikes, OROS gets more cautious even inside a healthy trend.

**THE 30-WEEK MA (moving average)**

The average price over the past 30 weeks - a slow trend line. Above a rising line = uptrend. It also serves as the safety-net level: a weekly close below it is the signal to get out.

**STOP**

A pre-chosen exit price under every position. It caps how much any single idea can lose. Stops only ever move UP, never down.

**RISK WALLET**

The worst-case total loss if every position hit its exit at once. Hard-capped at 6% of the account: once the wallet is spent, OROS stops buying, no matter how good the next signal looks.

**THE THROTTLE**

OROS checks its own recent report card before sizing new positions. When its picks have been losing money, it automatically bets smaller (three-quarter, half, then quarter size) and must win its way back to full size. The system responds to its own cold streak.

**EXPECTANCY (the scoreboard)**

The average money made or lost per position, counting wins AND losses. Positive = the approach makes money over time. We publish it even when it is negative - especially when it is negative.

**TOP PICKS**

Names that passed every test today, each with a full plan: an entry trigger, an exit price, and a target. The chart pages show the evidence behind each signal - nothing is a black box.

**DATA SOURCES & METHOD**

Prices: Yahoo Finance. Company filings: SEC EDGAR. Economic context (interest-rate spreads, credit conditions): US Federal Reserve (FRED). Method: trend/stage analysis after Stan Weinstein, blended with the frameworks of Minervini, O'Neil, Graham and Lynch. Educational only; not financial advice.

# The agents behind this report

OROS is a team of specialist agents, not one program. Each has one job and hands its output to the next - the same trace is journaled with every build, so each decision is auditable.

**DataAgent — universe & data**

647 candidate names (benchmarks removed)

**RegimeAgent — market regime**

regime = BULL

**RouterAgent — strategy mandate weights**

base weights: sepa 22%, canslim 18%, weinstein 17%

**MemoryAgent — experience-weighted tilt**

boosted weinstein x1.00, sepa x1.00

**ConstructionAgent — strategy ensemble + sizing**

12 holdings, 59% invested, 8 strategies

**RiskAgent — post-construction risk**

within limits; cash 41%

**ResearchAgent — deep-dive on the #1 pick**

A separate research specialist (REIT, Bank, Tech, Energy, Fund, ...) is chosen by a classifier for the day's top pick. It reads the company's SEC filings and writes the attached memo, with every claim cited to its source.

Guardrail: no agent can place a trade. The whole team proposes and journals only.

# Weinstein Top Picks — stocks + ETF track

| Type | Ticker | Setup | Last | Buy-stop | Stop | Target | R/R | Bull | vs 30w MA | Sh @1% | Risk $ |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Stock | ANNX | fresh | 5.96 | 6.13 | 5.46 | 8.59 | 3.7 | 83% | +9.2% | 1492 | $1,000 |

Every pick passed the complete Weinstein gauntlet:
  1. Stage 2 (Advancing) — the only buying stage
  2. No completed weekly close back below the 30-week MA
  3. Breakout volume surge AND rising Mansfield RS vs SPY
  4. Not extended above the rising 30-week MA

Trade plan discipline: enter ONLY if price takes out the buy-stop.
Exit on a weekly close below the stop (the 30-week MA invalidator).
Sizes shown risk 1% of the account per name — an illustration of
disciplined sizing, not an instruction.

ETF track: Weinstein's sector-first doctrine applied to plain
sector/index/commodity funds — often the safer expression of the
same signal (diversified, no single-company earnings gap).
Leveraged and inverse products are excluded: daily-reset leverage
makes their charts measure arithmetic, not accumulation.

OROS proposes and journals only — it never trades. Educational, not financial advice.

# ANNX — Weinstein weekly view (fresh Stage 2 setup)

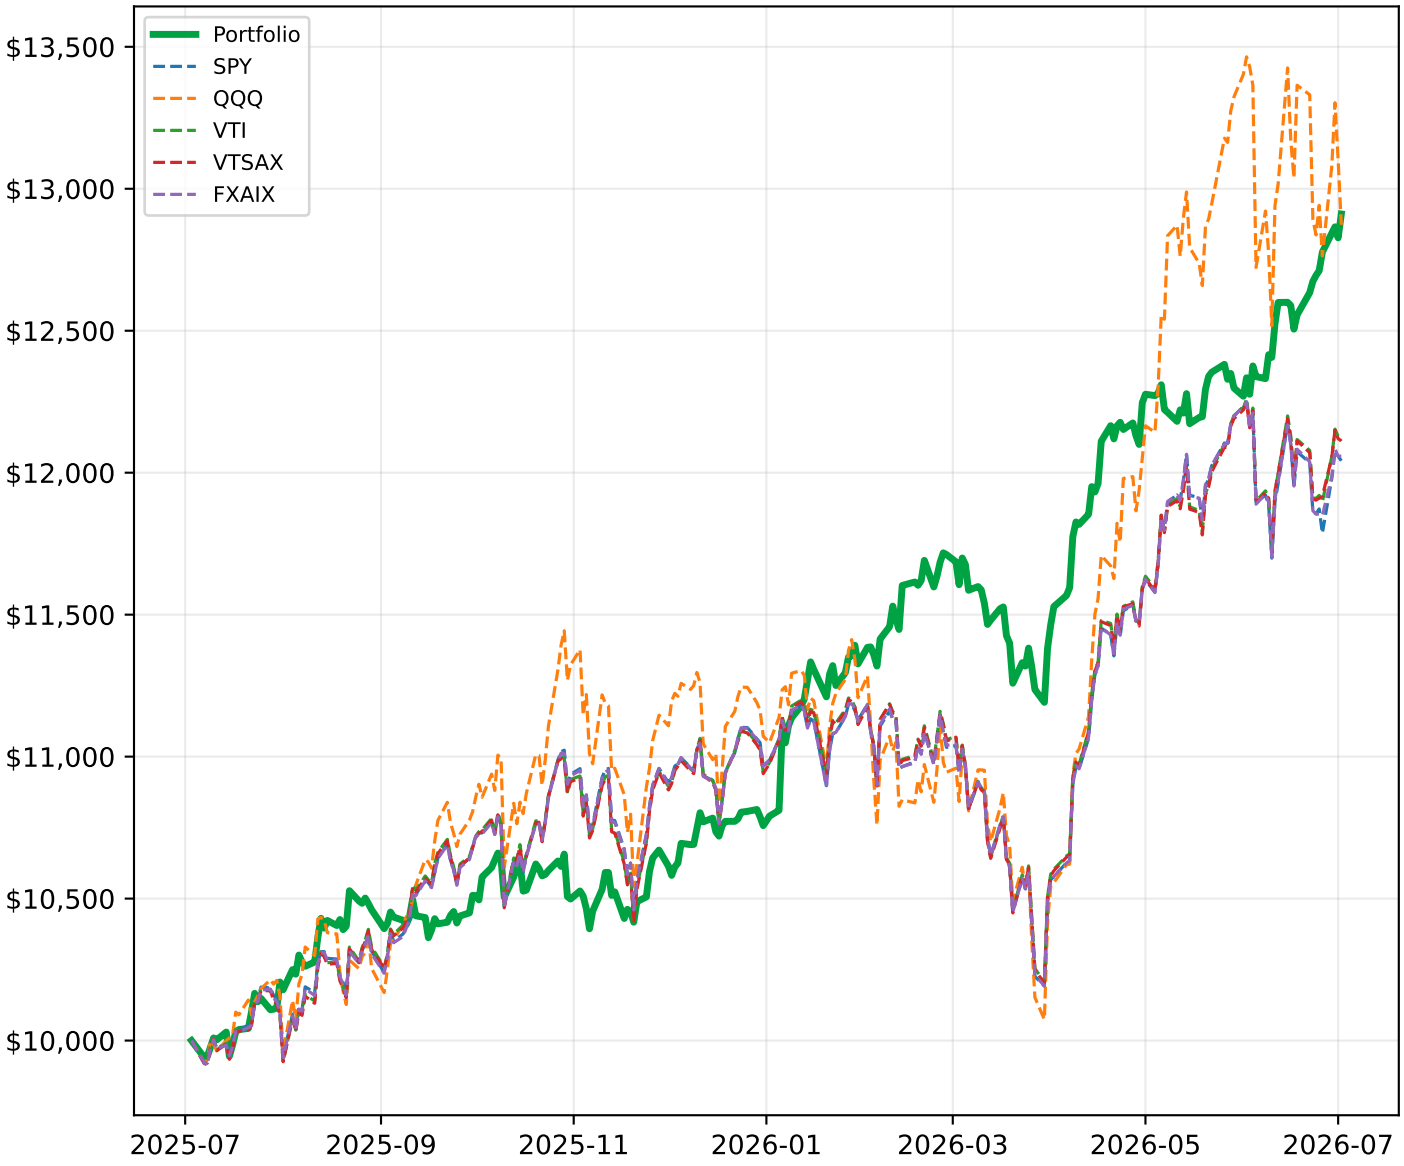

Signals passed: Stage 2 · rising 30w MA · volume 1.9x · RS +1.2 · +9.2% vs MA (not extended) · R/R 3.7. Enter only on breakout through the buy-stop; exit on a weekly close below the stop. Educational, not financial advice.
