How to read this report

WHAT OROS IS

Software that studies the US stock market every day, proposes a practice portfolio, and emails this report. It never trades and never touches real money. Everything here is simulated practice.

MARKET REGIME (page 1)

The overall health check. SPY is a fund that tracks the S&P 500, the 500 largest US companies - we use it as 'the market'. If SPY sits above its own 30-week average price and that average is rising, conditions are healthy (BULL). VIX is the market's fear gauge - it measures how much turbulence investors expect. When fear spikes, OROS gets more cautious even inside a healthy trend.

THE 30-WEEK MA (moving average)

The average price over the past 30 weeks - a slow trend line. Above a rising line = uptrend. It also serves as the safety-net level: a weekly close below it is the signal to get out.

STOP

A pre-chosen exit price under every position. It caps how much any single idea can lose. Stops only ever move UP, never down.

RISK WALLET

The worst-case total loss if every position hit its exit at once. Hard-capped at 6% of the account: once the wallet is spent, OROS stops buying, no matter how good the next signal looks.

THE THROTTLE

OROS checks its own recent report card before sizing new positions. When its picks have been losing money, it automatically bets smaller (three-quarter, half, then quarter size) and must win its way back to full size. The system responds to its own cold streak.

EXPECTANCY (the scoreboard)

The average money made or lost per position, counting wins AND losses. Positive = the approach makes money over time. We publish it even when it is negative - especially when it is negative.

TOP PICKS

Names that passed every test today, each with a full plan: an entry trigger, an exit price, and a target. The chart pages show the evidence behind each signal - nothing is a black box.

DATA SOURCES & METHOD

Prices: Yahoo Finance. Company filings: SEC EDGAR. Economic context (interest-rate spreads, credit conditions): US Federal Reserve (FRED). Method: trend/stage analysis after Stan Weinstein, blended with the frameworks of Minervini, O'Neil, Graham and Lynch. Educational only; not financial advice.

Weinstein Top Picks — stocks + ETF track

Type	Ticker	Setup	Last	Buy-stop	Stop	Target	R/R	Bull	vs 30w MA	Sh @1%	Risk $
Stock	VRTX	fresh	528.04	530.68	454.50	611.43	1.1	86%	+16.2%	13	$990

Every pick passed the complete Weinstein gauntlet:
  1. Stage 2 (Advancing) — the only buying stage
  2. No completed weekly close back below the 30-week MA
  3. Breakout volume surge AND rising Mansfield RS vs SPY
  4. Not extended above the rising 30-week MA

Trade plan discipline: enter ONLY if price takes out the buy-stop.
Exit on a weekly close below the stop (the 30-week MA invalidator).
Sizes shown risk 1% of the account per name — an illustration of
disciplined sizing, not an instruction.

ETF track: Weinstein's sector-first doctrine applied to plain
sector/index/commodity funds — often the safer expression of the
same signal (diversified, no single-company earnings gap).
Leveraged and inverse products are excluded: daily-reset leverage
makes their charts measure arithmetic, not accumulation.
